Hackers have never been closer to taking down the global economy than they are today. Corporations are being hacked with alarming frequency, and it's not just our normal fears of financial security that are at stake. The things we do online have vast implications for our day-to-day lives. This blog post will help you make smarter decisions about which sites you visit, which apps you download, and how to keep yourself safe on the Internet. Hopefully this guide will make things easier for everyone; hackers or not!

Exercise 1: write an introduction to an informative and factual blog post titled "A Concise Guide to Cooking". (1) Exercise 2: summarize the plot, plot twists, and plot devices of the movie "The Prestige" (1)

It's that time of year again to publish your book! It's great to see that you've got talent in writing. There are many e-book publishers out there. But the best way to be sure yours is published is to get an ISBN # from your publisher. The ISBN # will be associated with your publisher's name and will link to all sales records. This will guarantee it never goes out of print! You can also claim back royalties on sales made through an e-reader or website, assuming you can find a way for that company to sell it. Be careful not to fall for scams. "The Quality of Fantasy" can be found for sale by many companies. If it's not sold by your publisher, that's a red flag. You also want to make sure that you're purchasing the book directly from the publisher; if it comes from an outside seller make sure they are authorized retailers.

It is 2015 and I would like to start my own website! To begin with, you'll need to choose a domain name (the name of your site) and hosting (web space). You can purchase these together or separately, depending on what is available at the time. To host your website, you'll need a good web hosting company. If you want search engine optimization (SEO), make sure to choose a company that caters to keywords and other SEO factors. If you don't care about SEO, the best one is the one with the cheapest price! You don't want people to have to pay more than they have to for what they need. You should also purchase your domain name by contacting an accredited registrar like GoDaddy.com or HostGator.com (the latter of which hosts this blog).

With Google AdSense, you can earn money without doing any of the work! You just need to create text or graphic ads that appear on websites via the AdSense toolbar. The more traffic your sites get, the more earnings you get. People are always asking me what they should do to help their business grow. So I realized that if only I could know what every important action can do for their businesses, I would know what they should do to help their business grow! That's when I decided to build this list so that people can finally stop asking me about my favorite ways to promote a business.
